

Young Faculty Award Recipients

Since the program's inception in 2006, we have nurtured the careers of more than 500 researchers from universities and nonprofit institutions across the nation.

2024

Principal Investigator	Institution	PM Mentor	Title
Samuel Oliveira	North Carolina A&T State University	Christopher Bettinger	Spatial-temporal Dynamics for Predictive Multiscale Models of Multi-cellular Circuit
Yang Lin	University of Rhode Island	Adam Willis	Precision in Miniature: Revolutionizing MPS with Digital Acoustofluidics and Nanoscale 3D Printing
Jinghua Li	Ohio State University	Joeanna Arthur	Spatially resolved, non-genetic optoelectronic modulation of neuronal activities with a monolithic photoelectrode
Aashish Manglik	University of California San Francisco	Michael Feasel	Targeting allosteric sites for seek and destroy countermeasures for opioid poisoning
Craig Wilen	Yale University	Shannon Greene	Rapid Identification of Viruses and Ligands (RIVAL)
Maria Sakovsky	Stanford University	Andrew Detor	Embodied Structural Computing for Real-Time Stiffness Adaptation
Yiyang Li	University of Michigan	Keith Whitener	EMI-resilient nonvolatile memory using oxygen ion devices
Jairo Alberto Diaz Amaya	Rochester Institute of Technology	Keith Whitener	Osmotic Signalers for Functional Materials
Stephanie Gil	Harvard University	Nathaniel Bastian	Characterizing and Mitigating Adversarial Impacts on Multiagent Reinforcement Learning
Mahdi Hosseini	Northwestern University	Sunil Bhawe	Coherent Levitation of Macroscopic Sensors
Saad Bhamla	Georgia Tech Research Corporation	Susan Swithenbank	Squid-Inspired Nozzles for Enhanced Efficiency and Thrust in Rotary Propulsors
Alexandra Paterson	University of Kentucky	Susan Swithenbank	Converting underwater noise pollution into electricity: Acoustic sensors to make informed decisions for unmanned underwater vehicles

Principal Investigator	Institution	PM Mentor	Title
Patricia Alves-Oliveira	University of Michigan	Thomas Schenkel	Authenticity Markers in Artist-Robot Interaction
Haizhao Yang	University of Maryland College Park	Yannis Kevrekidis	Theoretical and Algorithmic Foundation of Interpretable Reinforcement Learning for Intelligent Computation and Modeling
Peng Bai	University of Massachusetts Amherst	Yannis Kevrekidis	Deep Learning for Discovering Optimal, Synthesizable Inorganic Porous Materials
Jia (Kevin) Liu	Ohio State University	Alvaro Velasquez	Decentralized Sequential Decision Making in the Data-Limited Regime: A Self-Supervised Pretrained Foundation Model Approach
Christopher De Sa	Cornell University	Alvaro Velasquez	Decentralized Online Parameter-Efficient Fine-Tuning of Compressed Models
Frederic Sala	University of Wisconsin	Alvaro Velasquez	Active Adaptation for Decentralized Foundation Models
Rose Yu	University of California, San Diego	Erica Briscoe	Grounding LLMs with Physical Laws
Thirimadura Charith Mendis	University of Illinois at Urbana Champaign	Howard Shrobe	Language and Hardware Adaptive Representations and Techniques for Compiling Heterogeneous Workloads
Priyanka Raina	Stanford University	Howard Shrobe	A Fast Design Space Exploration Framework and Compiler for Heterogeneous Systems with Neural Network Accelerators
Ellie Pavlick	Brown University	Matthew Marge	Discovering and Controlling Emergent Symbolic Mechanisms in Neural Networks
Mushuang Liu	University of Missouri	Victoria Romero	Towards Adaptable and Socially Intelligent Reinforcement Learning
Scott Cushing	California Institute of Technology	Justin Cohen	Cascaded Thin-Film Lithium Niobate Photonic Circuits Create Entangled Photon Triplets

Principal Investigator	Institution	PM Mentor	Title
Amir Arbabi	University of Massachusetts, Amherst	Anna Tauke-Pedretti	Metalens-Imaged Optical Coupler Arrays
Carter Yagemann	Ohio State University	Lok Yan	End-to-End Modeling and Mitigation of Fault Injection Attacks
Ognjen Ilic	University of Minnesota, Twin Cities	Yogendra Joshi	University of Minnesota, Twin Cities, Ultralightweight Nanophotonic Radiators for Adaptive and High-Power Heat Rejection
Jonathan Singer	Rutgers University	Hunter Martin	Formable Ordered Microcomposite Energetics
Christopher Limbach	University of Michigan	Michael Nayak	View-Obstructed Delivery of Lunar Power by Optomechanically Guided Beams
Savio Poovathingal	University of Kentucky	Sarah Popkin	Gas-surface scattering dynamics in very low Earth orbit
Steven Berg	Rutgers University	Sarah Popkin	Data Driven Engineering for VLEO Spacecraft Aerodynamic Performance Enhancement

2023

Principal Investigator	Institution	PM Mentor	Title
Timothy Balmer	Arizona State University	Jean-Paul Chretien	The Role of Descending Auditory Signals in Neuronal Hyperactivity and Tinnitus
Weinan Xu	University of Akron	Linda Chrisey	Hierarchical Biocomposites with Exceptional Thermal Conductivity from Synergistic Microbial Biosynthesis
Joerg Werner	Boston University	Leonard Tender	Ultrathin Sorbent Coatings with Bio-inspired Multi-ligand Binding Sites for Energy-efficient Capture and Release of Carbon Dioxide
Ryan Truby	Northwestern University	Catherine Campbell	Biocompatible Soft Batteries via Bundles of Axon-Inspired, Ionogel Composite Fibers
Hongyu Zhou	University of	Tiffany Prest	Moss-Embedded Living Building

Principal Investigator	Institution	PM Mentor	Title
	Tennessee, Knoxville		Materials for Acre-scale Landscape Cooling
Aaron Morris	University of Michigan	Christopher Bettinger	Implantable Tissues with Engineered Cells to Detect and Fight Sepsis
Andrew Gross	University of South Carolina	Andrew Detor	Extraction of Many Material Properties from Analysis of a Few Data Rich Experiments
Ian McCue	Northwestern University	Andrew Detor	Learning Material Properties Through High-Speed Image Acquisition During Subtractive Machining
Rahim Esfandarypour	University of California, Irvine	Rhith Chansrasekar	Wireless, Self-powered, Triboelectric-nanogenerator-resonance Force Sensing Array
Justin Little	University of Washington	Michael Nayak	Power Extraction from Mini-Magnetosphere Polarization Fields
Mattias Fitzpatrick	Dartmouth College	Mukund Vengalattore	Non-Reciprocal Lattices of High-Q Microwave Cavities for Enhanced Magnetometry
Xianming Dai	University of Texas at Dallas	Yogendra Joshi	Designing Flow-Separation Evaporative Cooling for 3D Heterogeneous Microsystems
Zhiting Tian	Cornell University	Thomas Kazior	Transient Nanoscale Temperature Mapping of Active RF Devices
Yuzhe Xiao	University of North Texas	Thomas Kazior	Exploring Thermal Properties of Nanoscale Wide Bandgap Semiconductors via Ultrafast Thermal-emission Spectroscopy
Alireza Marandi	California Institute of Technology	Justin Cohen	Few Optical-Cycle Nonlinear Nanophotonic Circuits
Kiyoul Yang	Harvard University	Justin Cohen	Integrated Femtosecond Pulse Synthesizer
Mengjie Yu	University of Southern California	Justin Cohen	On-Chip Electrical Synthesis of Few-Cycle Light via Optical Frequency Comb
Ethan Secor	Iowa State University	Bryan Jacobs	Aerosol Jet Printing of Bespoke Low-Loss Electronics with Nanocomposite Dielectrics
Matt Eichenfield	University of Arizona	Benjamin Griffin	Reconfigurable Single Chip Radio Frequency Signal Processor Architecture Search for Edge Efficiency

Principal Investigator	Institution	PM Mentor	Title
Siddhartha Ghosh	Northeastern University	Benjamin Griffin	Compound Semiconductor on Piezoelectric Strongly Confined Microacoustic Integrated Circuits (COSMIC) for RF Signal Processing
Mohsen Imani	University of California, Irvine	Bryan Jacobs	Hyperdimensional Computing for Robust and Efficient Cognitive Learning
William Renninger	University of Rochester	Benjamin Griffin	Contact-free Travelling-wave Optomechanics for Acoustic Material Spectroscopy
Talia Ringer	University of Illinois Urbana-Champaign	William Martin	Relation Learning for Proof Automation - PRICELESS
Maria Gorlatova	Duke University	Matthew Wilding	Runtime Identification of Detrimental Augmented Reality (AR) Experiences through AR-specific Quality of Experience (QoE) Modeling and Monitoring
Priyadarshini Panda	Yale University	Howard Shrobe	μ MAS: Micro-Macro Hardware-Algorithm Architecture Search for Edge Efficiency
Aatmesh Shrivastava	Northeastern University	Howard Shrobe	Nano-Watt Power Machine-Learning Hardware using Precision Analog Computing
Elias Bareinboim	Columbia University	Howard Shrobe	Causal Reinforcement Learning (CRL): Decisions, Explanations, and Generalizations
Shon Cook	SRI International	John-Francis Mergen	Vehicular Reconfiguration and Rapid Repairs for Remote, Outlying Operations using ML (VRRROOM)
Patrick McCormick	University of Kansas	Frank Robey	Enabling Spectrally Aware Cognitive RF Sensing Principal Investigator
Adam Webb	Michigan Technological University	Frank Robey	Shared Spectrum Target Detection and Track Estimation (STARDATE)

2022

Principal Investigator	Institution	PM Mentor	Title
Jerzy Szablowski	Rice University	Linda Chrisey	Therapeutics for Rapid Cold Adaptation Beyond the Natural Human Capability

Principal Investigator	Institution	PM Mentor	Title
Congrui Grace Jin	University Nebraska-Lincoln	Matthew Pava	Creating a Synthetic Lichen
Shelly Zhang	University of Illinois Urbana-Champaign	Jean-Paul Chretien	Wireless Magnetic Robot for Precise Hierarchical Control of Next-Generation Mechanotherapy for Tissue Regeneration and Injury Repair
Yun Chen	Johns Hopkins University	Matthew Pava	Fibrosis, Inflammation, Revascularization, and Migration (FIRM) Modulation for Muscle Regeneration
Maxim Shcherbakov	University of California, Irvine	Rohith Chandrasekar	Strongly Correlated Material Systems and Sensors
Owen Miller	Yale University	Rohith Chandrasekar	Fundamental Limits to Electromagnetic Nonreciprocity via Generalized Conservation Laws
Hang Yu	Virginia Polytechnic Institute and State University	Andrew Detor	Autonomous Solid-State Additive Repair of Aerospace Grade Aluminum Through In Situ Laser Acoustic Resonance Spectroscopic Measurement of Interface Strength
Farnaz Niroui	Massachusetts Institute of Technology	Vishnu Sundaresan	Mechanical Neuromorphic Metamaterials for Multifunctional Nanosystems
Amir Houmansadr	University of Massachusetts Amherst	Mike Lack	Towards Theoretical Foundations for Information Controls
Cody Buntain	University of Maryland	Brian Kettler	M3I – Maps, Models, and Metrics for Influence Efforts by State/Non-State Actors
Yan Shoshitaishvili	Arizona State University	William Martin	Shining Light on Occluded Vulnerabilities
Yinzhi Cao	Johns Hopkins University	William Martin	Abstract Modeling of Control- and Data-Flow Guards of Inactive Vulnerabilities via Symbolic Object Graph
Mohsen Lesani	University of California, Riverside	Serge Bratus	Information and Vulnerability Flow Type Systems
Syed Rafiul Hussain	Pennsylvania State University	Serge Bratus	Automated Reasoning and Repairing Framework for

Principal Investigator	Institution	PM Mentor	Title
			Systematic Assurance of 5G RAN Systems
Ying Wang	Stevens Institute of Technology	Serge Bratus	5G Causality, Formal Reasoning and Resilience
Dorsa Sadigh	Stanford University	Matthew Marge	Learning and Influencing Conventions in Human-Machine Collaboration
Ankur Mehta	University of California, Los Angeles	Rohith Chandrasekar	Printable Mechanical Autonomy
Timothy Koeth	University of Maryland	David Abe	A Project to Catechize Dielectric Charging (ACDC)
Tim Horn	North Carolina State University	David Abe	Electron Interactions with Microstructures and Defects During Additive Manufacturing
Yanghyo Kim	Stevens Institute of Technology	Jason Woo	Energy-Efficient and MIMO Approaches on Millimeter-Wave Dielectric Fibers and Wireless Interconnects for Space Missions
John Lipor	Portland State University	Jeffrey Rogers	Information-Driven Sensor Management via Nonparametric Divergence Estimation
Florian Meyer	University of California, San Diego	Jeffrey Rogers	Active Planning for Geoacoustic Inversion
Christopher Brinton	Purdue University	Mary Schurgot	FL-NTN: Fog Learning Orchestration of Heterogeneous Model Training across Hybrid Terrestrial and Non-Terrestrial Network Systems
Gregory Falco	Johns Hopkins University	Greg Kuperman	Orbital Resilient Blockchain Interagent Transaction Service (ORBITS) Architecture: A Resilient, Zero-Trust Architecture for Hosted Payloads and Space Infrastructure as a Service
Amrita Basak	Pennsylvania State University	Salvatore Buccellato	Enabling Fabrication of Large-Scale IN625 Parts Using Multi-Laser Powder Bed Fusion
John Hwang	University of	Paul Calhoun	Large-Scale Multidisciplinary

Principal Investigator	Institution	PM Mentor	Title
	California, San Diego		Design Optimization of Power Beaming-Enabled Air Platforms
Byron Boots	University of Washington	Stuart Young	Efficient, Agile, Decentralized Autonomy via Composable Policies
Giuseppe Loianno	New York University	Stuart Young	Integrated Visual Perception, Learning, and Control for Super Autonomous Robots

2021

Principal Investigator	Organization	PM Mentor	Title
Scott Medina	Pennsylvania State University	Seth Cohen	Enhancing the Ambient Stability of Biologics through Fluorous Dispersion
Achuta Kadambi	University of California, Los Angeles	Jean-Paul Chretien	MMHEALTH: Multimodal Health Sensing to Identify COVID-19 Signatures
Deva Chan	Purdue University	Linda Chrisey	Microbiome Regulation of Glycosaminoglycan in the Synovial Joint
Johnatan Aljadeff	University of California, San Diego	Gopal Sarma	Electrical Coupling between Sensory Receptor Neurons: A Shortcut Mechanism for Swift Execution of a Motor Program
Todd Gaines	Colorado State University	Blake Bextine	RNA-Targeting to Control Invasive Plant Species
Jie Gao	Missouri University of Science and Technology	Rohith Chandrasekar	Upconversion Photoluminescence from 2D Materials with Strain-Enabled Broadband Operation
Katerina Fragkiadaki	Carnegie Mellon University	Jiangying Zhou	From 3D Perception to Spatial Intelligence: Self-supervising Hierarchical Neural 3D Perceptual Simulators for Transferring Learned Physics and Policies across Views, Objects, Scenes and Tasks
Jason Lo	The University Corporation at California State University, Northridge	Jiangying Zhou	A Homological Approach to Machine Reasoning

Principal Investigator	Organization	PM Mentor	Title
Thomas J. Kempa	Johns Hopkins University	William Carter	Multifunctional Exoskeletons from Robust and Responsive 2D Molecular Frameworks
Ayaskanta Sahu	New York University	Mark Wrobel	Exploiting Strong Coupling between Colloidal Quantum Dots and Avalanche Amorphous-Selenium for High Performance Hybrid Mid-Wave Infrared Sensors and Detectors
Jie Fu	University of Florida	Ted Senator	Game-Theoretic Reasoning and Synthesis of Defense with Strategic Deception and Counter-Deception
Paul Gazzillo	University of Central Florida	Mark Flood	Tracking Corporate Relationships at Scale
Mark Finlayson	Florida International University	Brian Kettler	Computational Narrative Representations for Information Operations
Rachel Cummings	Columbia University	Joshua Baron	Guarding Against User Misperceptions of Differential Privacy
Georgios Portokalidis	Stevens Institute of Technology	William Martin	Effective Software Monitoring Leveraging Hardware Debugging Extensions
Hao Zhang	Colorado School of Mines	John-Francis Mergen	Autonomous Group Introspective Learning and coopEition (AGILE) for Cross-Capability Multi-Robot Adaptation
Kai Ni	Rochester Institute of Technology	Ali Keshavarzi	A Material-Device-Circuit Co-Design of Reliable and Logic-Compatible Hfo ₂ based Ferroelectric FET
Asif Islam Khan	Georgia Institute of Technology	Ali Keshavarzi	Engineering the Gate-Dielectric Stack in Ferroelectric Field-Effect Transistors
Elaheh Ahmadi	University of Michigan	Thomas Kazior	GaN/ Ga ₂ O ₃ wafer-Bonded Aperture VERTICAL Transistor (BAVET) for RF applications
Aaswath Patabhi Raman	University of California, Los Angeles	Whitney Mason	Compact Efficient Cryogenic Electroluminescent Coolers
Tingyi Gu	University of Delaware	Gordon Keeler	Chiral Exceptional Point Manifested Active Tuning in Integrated Photonics

Principal Investigator	Organization	PM Mentor	Title
Najme Ebrahimi	University of Florida	Thomas Kazior	Miniaturized and Power-Efficient MMW Arrays with Precise Electrical and Thermal Optimization for Future Low-Cost Standardization
Michael Haberman	Applied Research Laboratories at The University of Texas at Austin	Jeffrey Rogers	Acoustic and Vibration Sensing Metamaterials Enabled by Electro Momentum Coupling
Grace X. Gu	University of California, Berkeley	Jeffrey Rogers	Piezoelectric Metamaterials with Engineered Electro Momentum Coupling
Sashank Narain	University of Massachusetts Lowell	Mary Schurgot	Secure Privacy Preserving Access to Networks with ML (SpanML)
Arka Majumdar	University of Washington	Robert Saperstein	Optically Rewritable Photonic Integrated Circuits Based on Phase Change Materials
Liang Feng	University of Pennsylvania	Robert Saperstein	Programmable Lithography-Free Integrated Photonics for Signal Control and Networking
Suo Yang	University of Minnesota	Andrew Baker	Hypersonic Sonic Boom Theory Based on Line-Distributed Energy Impulse Source: Lift, Shape, and Thermochemistry
Steven A. E. Miller	University of Florida Board of Trustees	Andrew Baker	Analytical Prediction of Near-Field Hypersonic Aerodynamics
Caterina Lamuta	University of Iowa	Cmdr. Kyle Woerner	Cephalopods-inspired Self-morphing Stretchable Soft Skin from Twisted and Coiled Artificial Muscles
Ifana Mahbub	University of North Texas	Lt. Col. Paul Calhoun	Next Generation of Wireless Power Transfer Network of Unmanned Aircraft System Using Electromechanical Beamforming
Stuart Laurence	University of Maryland	Lt. Col. Josh Stults	Free-Flight Force and Moment Measurement in Hypersonic Impulse Facilities Using Multi Camera Telecentric Visualization and Massively Parallel Scene Reconstruction

2020

Principal Investigator	Institution	PM Mentor	Title
Warda Ashraf	University of Texas at Arlington	Lori Adornato	Recreated Roman Concrete (RRC) using Alkali-Activated Calcined Clay
Mehdi Javanmard	Rutgers University	Paul Sheehan	Lab-on-a-Microparticle: Injectable Wirelessly Powered Label-free Nanowell Sensors for In Vivo Quantification of
Daniel Kulp	The Wistar Institute	Amy Jenkins	A Machine Learning Algorithm to Accelerate Development of In Vivo DNA-Vectored Antibody Countermeasures for
Mark Blenner	Clemson University	Blake Bextine	Embedding Bio-Sentinels in the Indoor Microbiome to Remediate Airborne Threats
Edmon Perkins	North Carolina State University	Jiangying Zhou	Flexible Reservoir Computing Tensegrity Robots
Jordan Raney	University of Pennsylvania	Jiangying Zhou	Distributed Intelligence in Kirigami-Inspired Flexible Architectures
Meredith Silberstein	Cornell University	Michael Fiddy	Theory and Realization of Bioinspired Polyelectrolyte-Based Soft Matter Circuits
Pierluigi Nuzzo	University of Southern California	Ted Senator	Scalable Exploration of AI-Enabled, Reliable, and Cost-Effective Architectures (SEARCH)
Hang Ren	Miami University	William Carter	Nanoscale Revelation of the Nucleation of Corrosion
Florian Schaub	University of Michigan	Joshua Baron	Enabling Comparative Analysis of Privacy Expectation-Risk Misalignments in Exposure-sensitive Populations
Michelle Mazurek	University of Maryland	Joshua Baron	Generalizing to Understudied Populations through the Lens of Key Privacy Challenges
James Fairbanks	Georgia Tech Research Institute	Joshua Elliott	Model Aware Computing with Scientific Categories
Benjamin Gyori	Harvard College	Joshua Elliott	Collaborative Scientific Discovery with Semantically Linked Machine-Built Models
Julian Rrushi	Oakland University	Jonathan Smith	A Quest for the Physics of Cyberspace
Quntao Zhuang	University of Arizona	John Burke	Distributed Quantum Sensor Networks Enhanced by Quantum

Principal Investigator	Institution	PM Mentor	Title
			Error Correction
Wenjuan Zhu	University of Illinois Urbana-Champaign	Benjamin Griffin	Advanced Tandem Gate Dielectrics for High-Temperature Electronics
Jon Ihlefeld	University of Virginia	Benjamin Griffin	Resilient Epitaxial Gate Oxides for High Performing
Justin Metcalf	University of Oklahoma	Thomas Rondeau	Defining the Utility of the Electromagnetic Spectrum
Ishan Chattopadhyay	University of Chicago	Bartlett Russell	Quantification of Cognitive Dissonance via Recursive Decision Forests
Andrew Schwartz	Stony Brook University	Bartlett Russell	DiReCCT Dissonance: Quantifying Relations in Human Beliefs using Deep Learning and Computational
Yahya Tousi	University of Minnesota	Young-Kai Chen	Wideband and Interference-Resilient Mixed Mode Time Transfer for Distributed Radios
Kaixuan Ni	University of California, San Diego	Adam Bryant	Single-electron Sensitive Liquid Xenon Detector for Reactor Antineutrino Monitoring
David Hill	SRI International	Jeffrey Maas	2D Electron Gas Geometric Diode Rectenna
Saeed Zeinolabedinzadeh	Arizona State University	Jeffrey Maas	Novel Analog Wireless Synchronizing Scheme for Extremely Low Latency Time Transfer
Prasanna Balachandran	University of Virginia	Daniel Javorsek	Accelerated Design of Ultra Low-Density High Entropy Alloys for Extreme Environments using Artificial
Phili Muscarella	SRI International	John Waterston	Floating Integrated Through-the-Sensor Simulation (FITS)
Chloe Dedic	University of Virginia	Nathan Greiner	Spatially Resolved Measurement of Temperature and Species to Investigate Fuel/Air Mixing and Flame
Jay McMahon	University of Colorado	Joseph Parrish	Soft-Robotic, Propellant-Free Servicers for LEO Spacecraft
Richard Linares	Massachusetts Institute of Technology	Joseph Parrish	A Paradigm Shift in the Space Enterprise via Servicing for LEO Mega Constellations

2019

Principal Investigator	Institution	PM Mentor	Title
Yu Yao	Arizona State University	Lori Adornato	Underwater Polarization Navigation Based on Chip-integrated Full-stokes Polarization Imaging System
Parijat Bhatnagar	SRI International	Eric Van Gieson	Remote Regulation of Cellular Medicine with Extracorporeal Devices
Colleen Doherty	North Carolina State University	Blake Bextine	Strategic Design and Development of a Plant Bio-mining System to Sustainably Harvest Rare Earth Elements from Domestic U.S. Sources
Keriann Backus	University of California, Los Angeles	Tristan McClure-Begley	Covalent Modulators of Proteostasis
Nick Vamivakas	University of Rochester	Joseph Altepeter	Quantum Concepts in Classical Optics
Denys Bondar	Tulane University	Joseph Altepeter	Quantum Reservoir Engineering Inspired Classical Optical Technology
Pierre-Emmanuel Gaillardon	University of Utah	Mark Wrobel	Smart City Threat Detection Using Integrated Chemical Sensing and Machine Learning
Simon Garnier	New Jersey Institute of Technology (NJIT)	Joshua Elliott	Ant Colonies as an Animal Model to Understand the Economic, Environmental and Conflictive Drivers of Mass Migrations
Tudor Dumitras	University of Maryland	Joshua Baron	Transferable Factors of Updating Behavior for Predicting Vulnerability of Patching and Exploitation
Matthew Hicks	Virginia Polytechnic Institute and State University	Keith Rebello	Digital Techniques for Exposing and Eliminating Information Hidden in SRAM's Analog Domain
Jeff Huang	Texas A&M Engineering Experiment Station	Sergey Bratus	SmartScript: A Learning-based Approach to Static Type and Semantic Inconsistency Analysis of Dynamic Scripts (and Other Semi-Structured Code)
Omar Haider Chowdhury	University of Iowa	Raymond Richards	A Principled Approach to Identifying Cellular Network Attacks

Principal Investigator	Institution	PM Mentor	Title
Roozbeh Tabrizian	University of Florida	Timothy Hancock	Ferroelectrically Transduced Ge Nano-Fin Bulk Acoustic Resonators for Chip-Scale Instinctually Adaptive RF Spectral Processing
Loai Salem	University of California, Santa Barbara	Timothy Hancock	Fully Integrated Tunable N-Path Frequency-Selective Limiters for Self-Adaptive Interference Suppression
Amir Safavi-Naeini	Stanford University	Gordon Keeler	A General and Ultra High-Performance Platform for Nonlinear Photonics
Qing Li	Carnegie Mellon University	Gordon Keeler	Visible and Mid-Infrared Frequency Comb Generation in Wide-Bandgap Photonic Materials
Xiaoyu (Rayne) Zheng	University of California, Los Angeles	William Carter	Additive Manufacturing (AM) of Highly Responsive Piezoelectric Materials with 3D Addressable Electrode Interfaces and Strain Amplifications
Reginald F. Hamilton	Pennsylvania State University	William Carter	Additive Manufacturing of Functional Hierarchical Shape Memory Alloys
Corie Cobb	University of Washington	William Carter	Additive Manufacturing for High-Energy-and-Power Multi-Functional 3D Batteries
Jason Kawasaki	University of Wisconsin-Madison	Whitney Mason	Mismatched Epitaxy of Infrared Device Materials Using Graphene-Mediated Lateral Overgrowth
Jeewan Kim	Massachusetts Institute of Technology	Whitney Mason	Dislocation-Free Heteroepitaxy of IR Devices by Remote Epitaxy
Chung-Tse Michael Wu	Rutgers University	James Wilson	Metamaterial Integrated Ultra-Broadband Antenna Array with Embedded Reconfigurable Non-Foster Circuits
Ting-Yen Shih	University of Idaho	Rohith Chandrasekar	A Machine Learning Approach to Automated Non-Foster Circuit Synthesis
Vishal Saxena	University of Delaware	Gordon Keeler	Silicon Photonics-Enabled Reconfigurable Optical Analog Processor
Abhijit Mahalanobis	University Central Florida	Jiangying Zhou	Minimum L1 Norm Specialist Networks for Learning Sparse

Principal Investigator	Institution	PM Mentor	Title
			Active Pathways
Luat Vuong	University of California, Riverside	Jiangying Zhou	Rapid and Robust Processing in Spatially Multiplexed Optical Systems: Leveraging Lattice Defects for Pyramid Learning
Takashi Tanaka	University of Texas at Austin	Jiangying Zhou	Rationally Inattentive Predictive Vision via Directed Information Regularization
Fabio Semperlotti	Purdue University	Joshua Stults	A Variable and Multi-Fractional Order Computational Mechanics Framework: Simulation, Optimization, and Monitoring of Hypersonic Structures in a Multi-Physics Environment
Kourosh Shoele	Florida State University	Nathan Greiner	Environment Informed Vibration Based Health Monitoring Technique
Koki Ho	Georgia Tech Research Corporation	Ana Saplan	Time-Expanded Space Logistics Network Modeling and Optimization for On-orbit Servicing, Assembly, and Manufacturing

2018

Principal Investigator	Institution	PM Mentor	Title
Markita Landry	University of California, Berkeley	Al Emondi	Brain Chemical Signaling: A New Input Signal for Brain-Computer Interfaces
Oscar Vazquez Mena	University of California, San Diego	Al Emondi	Acoustic Metamaterial for Ultrasound Transmission at 10 MHz Through the Skull for High Resolution Neural Modulation and Brain Imaging
Elizabeth Sattely	Stanford University	Blake Bextine	Engineering a Plant Chassis for Rapid and Scalable Production of Small Molecule Therapeutics
Neil Dasgupta	University of Michigan	Lori Adornato	Rational Design of Hierarchically Structured Anti-Fouling Surfaces
Chuanhua Duan	Boston University	Paul Sheehan	Replicating Neurotransmission Using 3-D Nanofluidic Devices with Nanoparticle-Blockage-Enabled Voltage-Gated Nanopore Arrays

Principal Investigator	Institution	PM Mentor	Title
Neville Sanjana	New York University	Renee Wegrzyn	Genome-wide CRISPR Approaches for High-Efficiency Homologous Recombination
Rui Bo	Missouri University of Science and Technology	Adam Russell	Agent-based Anti-gaming Platform for Wholesale Electricity Market Monitoring and Rule Design Using Big Data Analytics and Computational Intelligence
Heather Kulik	Massachusetts Institute of Technology	Anne Fischer	Adaptive-Focus Topological Features for Machine Learning-Driven Discovery of 2D Coordination Polymers
Haori Yang	Oregon State University	Michael Fiddy	Nanocrystalline Semiconductors for Radiation Detection
Jeremy Munday	University of Maryland	Michael Fiddy	Engineering the Quantum Vacuum
Victor Brar	University of Wisconsin-Madison	Michael Fiddy	Probing the Limits and Implications of Ultra-High Electric Field Concentrations in Graphene Plasmonic Resonators
Mercedeh Khajavikhan	University of Central Florida	Rosa Lukaszew	Topological Phenomena in Active Photonic Platforms
Michalis Polychronakis	Stony Brook University	Angelos D. Keromytis	Compiler-Assisted Software Specialization against Vulnerability Exploitation
William Wang	University of California, Santa Barbara	Boyan Onyshkevych	Dynamo: Dynamic Multichannel Modeling of Misinformation
Vinod Valikuntanathan	Massachusetts Institute of Technology	Hava Siegelmann	Adversarial Machine Learning through the Cryptographic Lens
Subith Vasu	University of Central Florida	Hava Siegelmann	TASER-FENTADET: Terahertz Handheld Detector Array Using Reflectance SpEctroscopy for Remote FENTAnyL DETection
Hyung Bae	Howard University	Hava Siegelmann	Polymer-Based Replicated Multi-Modal Fiber Bragg Grating (FBG) for Fentanyl Detection
Tom Goldstein	University of Maryland	Jennifer Roberts	Self-Assessing Network Models for Big Data Summarization
Ehsan Elhamifar	Northeastern University	Jennifer Roberts	RAISS: Robust, Adaptive, Interactive and Scalable Summarization for Big Data
Jonathan Klamkin	University of California, Santa	Gordon Keeler	Attojoule Sources for Photonic Integrated Circuits (ASPIC)

Principal Investigator	Institution	PM Mentor	Title
	Barbara		
Juejun Hu	Massachusetts Institute of Technology	Gordon Keeler	Reconfigurable Energy-Efficient Chip-scale Optical Network: Beyond the Classical Figure-of-Merit (RECONFig)
Nathalie de Leon	Princeton University	Gordon Keeler	Nanophotonics for Telecom Quantum Networks Based on Neutral Silicon Vacancy Centers in Diamond
Seth Caliga	SRI International	John Burke	Integrated Magnetic BEC Formation and Loading of an Optical Waveguide Trap for Atomic Inertial Sensing
Paul Hamilton	University of California, Los Angeles	John Burke	Increasing Spacetime Area Enclosed in Compact, High Quality Trapped Matter Wave Interferometers
Michael Bartlett	Iowa State University	Ronald Polcawich	Rapid, High Force Actuators through Mechanically ‘Invisible’ Heat Sinks
Evgueni Filipov	University of Michigan	Ronald Polcawich	Functional Small-Scale Actuation with Origami Inspired Assemblages
Hua Wang	Georgia Institute of Technology	Timothy Hancock	MAXIMA: Multi-Mode Hybrid Power Amplifier with EXtreme Instantaneous Bandwidth and Recursive Scalable Marchand-Doherty Load ModulAtion Network
Kaushik Sengupta	Princeton University	Timothy Hancock	Generalized Asymmetrical Multi-Port mm-Wave Power Amplifier Architecture for Simultaneous Frequency and Back-off Reconfigurability
Mac Schwager	Stanford University	Craig Lawrence	Decentralized Tactical Modular Teaming for Real-World UAS Networks
Mahyar Eftekhari	Arizona State University	Fotis Barlos	Horizontal Coordination in Disaster Relief Operations: Incentives and Mechanisms
Umit Ogras	Arizona State University	Neil Fox	RETICLE: Energy Harvesting IoT Devices for Situational Awareness
Hun-Seok Kim	University of Michigan	Neil Fox	Hyper-Dimensional Modulation for Robust Low-Latency Low-Power IoT Networks
Andrea L'Afflitto	University of	Jean-Charles	A Bio-Inspired Approach to Fly

Principal Investigator	Institution	PM Mentor	Title
	Oklahoma	Ledé	Undetected in Cluttered Environments
Daniele Schiavazzi	University of Notre Dame	Peter Erbland	Unified Bayesian Networks for Uncertain Inputs and Partial Model Ensembles
Sze Zheng Yong	Arizona State University	Timothy Chung	Identification and Estimation of Swarm Intent via Partitions of System Dynamics

2017

Principal Investigator	Institution	Title
Lizhen Lin	University of Notre Dame	Topological, Geometric and Statistical Foundations of Dynamic Networks
Paul Bogadan	University of Southern California	Data Driven Modeling Inference and Control of Complex Time Varying Networks: A Statistical Physics Approach
Stefanie Jegelka	Massachusetts Institute of Technology	The Promise of Diversity: Geometry, Probability, Optimization and Machine Learning
Amir Ali Ahmadi	Princeton University	Exploiting Geometry in the Design of Scalable Algebraic Relaxations for Nonconvex Polynomial Optimization
Mark Fuge	University of Maryland	Topology and Synthesis of Design Manifolds
Ilija Zeljkovic	Boston College	3D Printing of Novel High-Temperature Superconductors
Vladimir Manucharyan	University of Maryland	Multi-Terminal Semiconductor/Superconductor Hybrid Josephson Junctions
Maren Vitousek	Cornell University	Uncovering the Mechanistic Links between Stressor Exposure, the Social Environment, and Future Performance

Principal Investigator	Institution	Title
James Watson	Oregon State University	Comparing Micro-Macro Dynamics and Control Across Social-like Systems Using Equation-Free Modeling
Cong Trinh	University of Tennessee	ViPaRe (Virulent Pathogen Resistance): A Highly Adaptable Defense System Against Virulent Pathogens
Anushree Chatterjee	University of Colorado Boulder	Developing Sequence Blocking Adaptable Therapeutic Strategy for Pathogen Targeting
Zongfu Yu	University of Wisconsin-Madison	Physics-guided Machine Learning for the Inverse Design of Metasurfaces
Howard (Ho Wai) Lee	Baylor University	Ultrafast Nonlinear Epsilon-Near-Zero Optics in Active Conducting Oxide Metasurfaces
Zubin Jacob	Purdue University	Resonance Energy Transfer Model of No-Harmonic Light
Shelley Claridge	Purdue University	Translating Molecular Assembly in the Cell Membrane to Nanoscopic Graphene Devices
Yaniv Erlich	Columbia University	Resistant and Scalable Storage Using Semi-synthetic DNA
Michael Smanski	University of Minnesota	Engineering Reproductive Barriers to Accelerate Niche Differentiation
Andrew Nuss	University of Nevada, Reno	Development of Strategies to Target Key Mosquito Host-seeking Factors Governing Human Host Preference
Liang Guo	Ohio State University	Implantable, Programmable Integrated Cellular Circuits
Alexander Green	Arizona State University	Artificial Ribosomes for Fully Programmable Synthesis of Non-Ribosomal Peptides
David Cook	Kansas State University	Transcriptome Engineering for Enhanced Agronomic Defense, Response and Performance

Principal Investigator	Institution	Title
Mykel Kochenderfer	Stanford University	Modular Representations and Coordination for Lifelong Learning
Mohit Bansal	University of North Carolina at Chapel Hill	Dynamically Revising Neural Networks via Commonsense and Conversational Feedback
Zico Kolter	Carnegie Mellon University	Learning Optimization: Optimization in the Loop in Deep Learning Models
Jeffrey Nanzer	Michigan State University	Open-Loop Coherent Distributed Arrays
Arun Natarajan	Oregon State University	Collaborative mm-Wave Beamforming Relays with Self-Interference Cancellation for Simultaneous Transmission and Reception
Kurt Rohloff	New Jersey Institute of Technology	MARSHAL: Modular Adaptive Reuse of Secure and High-performance Advanced Libraries
Kaushik Chowdhury	Northeastern University	RAIDER: Reconfigurable and Application Independent Design for Radios

2016

Principal Investigator	Institution	Title
Ahmad S. Khalil	Boston University	Advanced Genetic Control for Gene Therapy Using Synthetic Biology
Alon A. Gorodetsky	University of California, Irvine	Reconfigurable Cephalopod-Inspired Smart Materials for Soldier Health
Amin Karbasi	Yale University	Efficient Learning of Human Intent from Observations
Casper Hartevelt	Northeastern University	Personalized and Crowdsourced Scenario Generation
Dae Hyun Kim	Washington State University	Design of High-Performance Multi-Tier Monolithic 3D Microarchitecture
Emilio Ferrara	University of Southern California Information Sciences Institute	Modeling Individual Trajectories and Incentives in Gamified Techno-Social Environments
Fang Huang	Purdue University	3D Super-Resolution Imaging of Intact Animals

Principal Investigator	Institution	Title
Hanna Cho	Ohio State University	Tailoring Structural Nonlinearity to Manipulate Mechanical Resonances
Imre (Risi) Kondor	University of Chicago	Multiresolution Machine Learning for Molecular Modeling
Jacob Adams	North Carolina State University	Modeling and Characterization of Wideband Communications Via Narrowband Channels Using Direct Modulation
James Boedicker	University of Southern California	Robustness of Collective Behavior in Heterogeneous Microbial Networks
James Manimala	Oklahoma State University	Metamaterials-Inspired Nonlinear and Inertant MEMS Devices
Jennifer Kitchen	Arizona State University	Hybrid Silicon/GaN-Based Digital Transmitter Hardware for Realizing Wideband Transmitter-to-Antenna Interfaces
Jing (Jane) Li	University of Wisconsin-Madison	Liquid Silicon: A New Computing Paradigm Enabled by Monolithic 3D Cross-Point Memory
Kathryn A. Whitehead	Carnegie Mellon University	Next-Generation mRNA Delivery Systems with Precise Spatial and Temporal Activity
Matthew Hirn	Michigan State University	Deep Wavelet Scattering for Quantum Many Body Physics
Nicholas G. Reich	University of Massachusetts Amherst	Optimal Infectious Disease Prediction with Multi-Scale Ensemble Models
Raina Plowright	Montana State University	Modeling Pathways to Zoonotic Spillover
Rebecca Schulman	Johns Hopkins University	Self-Targeting Biotic-Abiotic Interfaces
Samira Kiani	Arizona State University	Clustered Regularly Interspaced Short Palindromic Repeats (CRISPR)-Based Synthetic Genetic Circuits as Next Generation Gene Therapy of Inner Ear
Shu Jia	Stony Brook University	Wavefront-Engineered, High-Speed Super-Resolution Microscopy for Nanometer-Scale, Live-Tissue Imaging
Stephen Techtman	Michigan Technological University	Bilge Water Microbiomes as Biosignatures of Maritime Provenance
Suchi Saria	Johns Hopkins University	Continuous Learning of (Causal) Models from Streams
Sumeet Kumar Gupta	Pennsylvania State University	Ultra Low-Power, Non-Volatile Processors Enabled by Ferroelectric Transistors
T. Alex Perkins	University of Notre Dame	Bridging Gaps Across Multiple Spatial Scales for Models of Mosquito-Borne Viral Disease Dynamics
Xiang Cheng	University of	Studying the Emergent Collective Flows of Active

Principal Investigator	Institution	Title
	Minnesota	Fluids Using Engineered Bacterial Strains
Zhimin Xi	University of Tennessee	New Theory in Model-Based Design: A Design Foundation Driven by Probability of Design Errors

2015

Principal Investigator	Institution	Title
Swaroop Ghosh	University of South Florida	Threshold-Defined Switches for Novel Logic Engines
Caleb Fulton	University of Oklahoma	A Multi-Tiered, Systematic Approach to Digital Array Interference Mitigation
